

LAFORCE^{INC}

LEED

Leadership in Energy &
Environmental Design

A certification achieved through
the U.S. Green Building Council.

Pre-Installation & Sustainability:

LaForce recycles nearly 100% of our wood pallets, cardboard, aluminum and scraps (such as steel, stainless steel, brass and bronze). Our pre-installation service allows us to install hardware onto the doors prior to shipping. Therefore, we recycle all packaging material at our shop, which saves jobsite waste.

Sustainability is more than a buzzword.

It's a way of doing business.

LaForce is actively involved in LEED and a fair amount of jobs that come through LaForce are specified to be LEED-certified buildings.

Here are three ways we help our customers meet their goals for sustainability through the LEED rating system:

- 1 We have an accredited LEED AP Building Design + Construction employee on staff that has processed over 1,400 LEED requests/submittals throughout the years.
- 2 We built a database containing hundreds of vendor's LEED statements and we have developed a streamlined process that allows general contractors to receive a clean, electronic PDF of the submittal.
- 3 We stay abreast of the changes in the system, including LEED v4, the newest version of the LEED green building program. We continue to gain knowledge in the evolution of material transparency and life-cycle impacts.

In addition, our energy conscious Building Products Consultants can recommend products and maintenance tips for maximizing a building's energy efficiency. We take pride in guiding customers to choices that will help them succeed in this building certification.
