

KEY SYSTEM PROCESS

LAFORCE PROVIDES THE FOLLOWING KEY PRODUCTS AND SERVICES:

- Interchangeable Cores
- Patented Key Systems
- Standard and High Security Key Systems
- Multiple Manufacturers' Keys In Stock for Quick Turnaround
- Custom Key Cutting
- Core and Cylinder Rekeying Capabilities
- Development of Key Schedules
- Design of Key Systems

LaForce's keying experts design effective key systems that maintain superior building security. We guide building owners and facility managers throughout the keying process. When planning a key system, we consider the current system's functions and potential future needs.

KEY SYSTEM PROCESS

LaForce keying specialists partner with project managers to provide quality products and a convenient system.

1 Design the System

We will design the system based on the needs of the facility to be secured, while also working with special requests or needs from the owner/manager.

2 Initial Meeting

When requested by the facility manager, our team will meet and go over the best system to create a secure building with the facility owner/manager.

3 Finalize the Plan

After the building owner chooses a key control policy, implementation plan, and record management system, LaForce finalizes a key plan to fit the personalized processes.

4 Manage the System

After the building's key system is complete and the door locks are installed, LaForce securely stores the building's key system record for future needs.
